

Ricardo Ortiz Pozo

Mechanical Robotics Engineer

ricardoortizpozo@gmail.com

To Whom It May Concern,

I am pleased to provide this referral for Ricardo David Ortiz Pozo, who served as a Mechanical Robotics Engineer during the automated udon cooking machine development project at Hanwha fluid stores. I had the pleasure of working with him on this project, where he was integral to the Gantry system development for the noodle untangling machine.

Throughout the project, Ricardo demonstrated an impressive level of engineering expertise, and problem-solving skills to tackle difficult problems like noodle transfer from untangling to bowl and exception handling during untangling operations when errors occurred. He demonstrated complete understanding of requirements and took full ownership of his role, ensuring that the Gantry systems adhered to the project's high standards and operational requirements. His work directly contributed to the success of the project, adding reliability to the automated udon cooking system.

Additionally, I remember him as a person with great personal maturity who led a positive role in my project team. Lastly I would like to work with him again if given a chance.

Please feel free to reach out if you would like additional information about Ricardo's role and contributions.

Sincerely, Taejoon Jung Senior Engineer
